

## **INSRTUCTIONS FOR INSTALLATION:**

- Select the file Wave02.apk from folder
- Copy it to an android device via PC. You can put it anywhere in the phone.
- Open file manager on the device
- If file manager is not installed, it can be installed from PlayStore app on the phone.
- Browse the location where the file was stored and click install. Remember to change phone settings to allow third party apps to download.
- Note: Use a device similar to Nexus 5 in screen resolution. The app was made specific to Nexus 5 so running on other devices may change button and screen layout.

## **DESCRIPTION:**

### **HOME SCREEN**

- Scroll the pages left right to view to view the app features
- Click on sign up button if running for first time
- Click on login if an account was already created

### **SIGNUP**

- Enter valid information to start the app
- Click on start the journey button to take you in tutorial mode.

### **LOGIN**

- Enter valid login information same as entered during signup

### **NEWSFEED**

- To Upload a song click on Add a song
- This will open a pop up select 'BROWSE FROM MUSIC COLLECTION' button
- It will show the present ringtone in the phones (We did not added the .MP3 extension because trail devices may not have any music installed).
- Click on the song to Post
- Now the song is posted. Click likes and dislikes buttons to recommend the song.
- Click on the pen icon left to ADD SONG Button to edit the selected song.
- Notice the changing waveform and seekbar. Move the seekbar to positions where the song needs editing. (Delete, Cut, Undo, Redo not implemented due to non-availability of song clipper class on android sdk).

### **SETTINGS**

- Click the circular wheel on top right corner to select settings from Newsfeed.
- Change personal information and click preview.
- Change made should be visible on a new screen. Click the settings button the preview page right next to the 'Hometown' Textview.

- It will show more options to edit(Note : not implemented these because we did not had initial user's using the app).
- Click back to reach newsfeed.

## VIEWAS

- Select the viewas button from top of the screen
- Select any friend (pre-populated) to view how they see your profile.

## NOTE:

- YOUTUBE and Spotify integration not implemented because Spotify does not provide specific API's for android in java and YouTube allows videos to be posted. We are planning to look for alternate sources from online which allow to use their data on android without any copyright issue.
